I Introduction

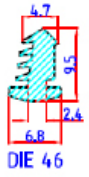

PDC is a leading manufacturer of PVC and Santoprene-based aluminium fenestration gaskets. We have built a reputation for consistent premium quality and competitive pricing. The PDC gasket range is produced from 100% virgin material which delivers superior quality and longer in-use life. Santoprene-based gaskets deliver better long-term consistency while PVC-based gaskets are used in appropriate applications where cost would be more important.

Intended use for gaskets

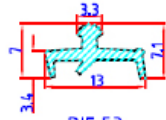

The PDC gasket range has been designed for fitment in domestic and light commercial aluminium fenestration and door installations. The installation is to be of a high standard and completed by a professional and experienced installer.
